Building Substructure – Below ground clay heave protection

BEWI ClayMaster is an EPS compressible-fill material used to reduce the pressure against foundations due to clay heave. Supplied coloured pink to easily differentiate from standard EPS.

It is installed to the sides of deep trench fill and to the base and sides of concrete beam piled foundations.

ClayMaster has been tested and approved by the British Board of Agrément (BBA) as a compressible fill material to reduce the pressure exerted on concrete foundations from expanding clay soils (clay heave). Certificate number 20/5831.

ClayMaster does not degrade when placed in high moisture areas and is resistant to the effects of freeze thaw. ClayMaster will remain an effective compressible fill for the life of the building.

ClayMaster is lightweight and easy to install. There are no requirements for special PPE when installing or cutting ClayMaster.

Dimensions

Standard Size	1200 \times 2400mm and 600 \times 1200mm (other sizes available to suit beam dimensions)
Standard	50, 75, 100, 150 and 200mm
Thickness	(Other thicknesses available to order)

Application There are no specific requirements in the Building Regulations

for the use of compressible-fill materials. Regulation A2 states that 'buildings shall be constructed so that ground movement caused by swelling, (or) shrinkage ...of the subsoil... will not impair the stability of any part of the building'. ClayMaster has been assessed by the BBA to prove its performance in meeting the requirement of this Regulation when installed in areas of possible clay heave. The NHBC Standards, Chapter 4.2, 'building near trees', states that low-density compressible polystyrene is a suitable proprietary material to alleviate ground pressures on foundations in shrinkable soils.

The table below shows thickness of ClayMaster required to meet the recommended void dimensions given in the NHBC guidance.

Ground heave potential	Underside of beam		Side of foundation and beam	
	NHBC Void Required (mm)	ClayMaster Thickness (mm)	NHBC Void Required (mm)	ClayMaster Thickness (mm)
High	150	250	35	75
Medium	100	175	25	50
Low	50	100	0	0

APPLICATION

Design

The following calculation may be used to ascertain the accurate thickness of ClayMaster required.

$T = 100 \times (H \div C) + 10$

BEWI ClayMaster compression curve

where:-

- T = Thickness of ClayMaster to be specified
- H = Predicted maximum clay heave in mm
- P = Maximum acceptable vertical pressure on the underside of the concrete ground beam
- W = Maximum acceptable lateral pressure to the sides of the concrete foundations (usually less than 40kN/mz)
- C = Compressive strain (%) in ClayMaster under given pressure P or W (taken from graph below)

This calculation allows for any initial deflection in the ClayMaster under the load of wet concrete.

When designing ground beams to support the weight of the building, care should be taken to prevent excessive local deflection of the beam in areas of low load, such as below patio doors.

Accreditation

ВВА	BEWI ClayMaster has been assessed and approved by the British Board of Agrément for use as a compressible fill material in foundation construction. Certificate number 20/5831
NHBC accepted	NHBC accepts the use of BEWI ClayMaster, provided it is installed, used and maintained in accordance with the BBA Certificate, in relation to NHBC Standards, Chapters 4.2 Building near tress; 4.3 Strip and trench foundations and 4.4 Raft, pile, pier and beam foundations.
Quality	All BEWI products are manufactured in production facilities which are certified to ISO 9001 Quality Management
Environmental Responsibility	All BEWI manufacturing facilities are ISO 14001 certified.
Compliance	BEWI ClayMaster conforms to the required properties as defined in BS EN 14933 – Thermal insulation and light weight fill products for civil engineering applications – Factory made products of expanded polystyrene (EPS) – Specification
Fire	Concrete foundations below ground are not required to provide fire resistance. When properly installed BEWI ClayMaster is fully protected by the foundation construction and soil backfill and will have no adverse effect on the fire performance of the building into which it is installed.

Environment and Sustainability:

100%	BEWI ClayMaster is 100% recyclable.
Biological	BEWI ClayMaster is non-toxic and non-biodegradable.
Properties	BEWI ClayMaster will not sustain mould growth and has no nutrient value to insects or vermin.

Disclaimer: Every effort has been made to ensure the correctness of the information provided in this data sheet and is based on data and knowledge accurate at the time of production. It is designed for experienced professionals in the building and construction industry and does not offer a complete overview of industry practices. Therefore, this cannot guarantee the performance results, as usage and installation conditions are outside our control. If you have any questions regarding the suitability of the application, please contact us.
